

Southern California Edison Company Electric Generating Stations and Major Transmission System in Central and Southern California

Serving the ten central and southern counties of California
— an area of 18,500 square miles.

Generating facilities totaling 1,394,180 kilowatts are linked
into one system by 3,900 miles of transmission lines.

Distribution of power to nearly 800,000 customers is
effected through 35 transmission stations and 214 distribution
substations and over 16,000 miles of lines.
